

ILRS AWG Summary

- Review of the reanalysis contributions to the ITRF2013 process, evaluation of the results and report on identified issues to be resolved
- The **1983 – 2013** reanalysis for ITRF2013 was completed and submitted as of October 24
- We are in discussions with ITRS/Zuheir on the possibility to extend the submission by one year and develop “ITRF2014”, with longer “shelf-life” by more than 1 yr
 - ILRS is committed to support such a plan by early 2015
- Pilot Projects planned immediately after ITRF completion:
 - low-degree spherical harmonic estimation
 - the incorporation of LARES in the operational products
 - observational-level modeling of loading corrections
 - combined orbital product release
